

Kongsberg XN series

The perfect digital finishing device is expandable for the future

In a world with rapid technology and business change, it is important to invest in equipment that offers all of the capabilities you need for the present, but with flexibility for the future. The Kongsberg XN is easily the most versatile digital finishing device ever introduced. Whether your focus is 2D or 3D; packaging, signs or displays; or with just about any material from vinyls to boards to wood; the Kongsberg XN is perfect for any job or application. It can even be used to cut flexographic plates as part of the Esko Digital Flexo Suite. The Kongsberg XN is available in seven different sizes from 1680 x 1270mm (66 inch x 50 inch) to 2210 x 6550mm (87 inch x 258 inch). Start with only the tooling options you need, with the knowledge that you can invest in more capabilities later, when your business grows.

KEY FEATURES

Tooling and functional add-ons can simply be retrofitted in the field to meet future needs.

An innovative extended beam clearance capability can be field retrofitted to handle materials up to 86mm (3 3/8 inch) thick.

Several models permit extending the length of the table by installing an additional table section.

The advanced i-cut Vision Pro system can be installed to contour cut graphic elements extremely accurately.

Productivity options such as conveyor feed, sheet feeder and roll feeder unit can be retrofitted.

SUBSTRATES

Folding carton

Acrylic
